Project 2 Info
ITSC 1213
2 April 2023

The methods restockProduct() and inventoryValue() I added to the test harness under the add items to inventory and show current inventory prompts respectively. I did not include any functionality to project 2 that was not in project 1.

This project is complete.

The challenging part of this assignment was cleanly reworking the code to suit a structure that involved inheritance and abstraction. I didn't want to re-design from the ground up, so I had to carefully decide what code I could re-use and what I needed to replace.

I learned how to take previously written code and efficiently modify it to fit a program with a new design model. I also became more proficient in implementing and managing abstract classes and interfaces. These will both help me a lot in the future.
